DETAILED ACTION

1. This action is responsive to After Final Amendment filed 02/20/2008.
2. The disposition of the claims is as follows: claims 1-11 and 13-20 are pending in the application. Claim 1 is the only independent claim. Claim 12 has been cancelled.

Claim Rejections - 35 USC § 102 and 103

3. In view of amended and cancelled claims and review of cited references, 102 and 103 rejections are withdrawn.

Allowable Subject Matter

4. Claims 1-11 and 13-20 are allowed.
5. The following is an examiner's statement of reasons for allowance:

Applicant's amended independent claim 1 stands novel over the related prior art. The related art of Evans et al. (US 6,845,178 B1), hereinafter Evans, does make use of a method and apparatus for characterizing pixels in an image of an object surface by providing at least two image of the surface wherein each pixel has a unique location common to all of the images; comparing each pixel value at each location to an identification matrix; and identifying the region in which each pixel is located based on the comparison.

Then there is Sharman (US 5,686,210) that provides for stored data is then processed to calculate the level of cyan dye or pigment for each sample in each color. After rejecting unsuitable ratios of cyan at different waveforms, the remaining valid

Art Unit: 2624

samples are averaged and the average is compared to predetermined values to determine the type of film or print material being evaluated.

Finally, there is Ishiguro (US 6,029,015) that uses the flash output correction value look-up table 21b stores data of the flash output correction table 21b shown in FIG. 5 which defines output correction values according to subject distances D and scene brightness B as parameters. In this instance, possible subject distance are divided into four ranges, namely a first distance range from a near distance (NEAR) to a first specific distance D1 (for instance 1.3 m), a second distance range from the first specific distance D1 to a second specific distance D2 (for instance 3 m), a third distance range from the second specific distance D2 to a third specific distance D3 (for instance 8.9 m), and a fourth distance range from the third specific distance D3 to infinity.

However, neither Evans, Sharman nor Ishiguro provides for an image capture apparatus, comprising: a camera capturing image data of an object; an illumination illuminating the object using a plurality of wavelengths; a storage unit storing a recorded image of an object; a comparison-determination unit comparing the recorded image with captured image data of the object and determining whether or not the recorded image and the captured image data match each other; a material determination unit determining the material of the object from the image data of the object which has been obtained using the plurality of wavelengths; and an image buffer storing the captured image, wherein the camera captures the image data of the object placed above the camera and the illumination, and wherein the image data is captured first for material determination, the image data only required for the material determination is stored in the image buffer, the image data for comparison with the recorded image is captured second, thereby setting

Art Unit: 2624

memory requirements for the image buffer smaller than an amount of data which can be stored in the image buffer as claimed in independent claim 1.

Therefore as claimed by the combined elements of amended independent claim 1, the cited references and prior art of record lack separately and in combination the elements of amended independent claim 1. Claims 2-11 and 13-20 depend from allowed independent claim 1 and therefore are also allowed.

6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Responses

7. Responses to this action should be mailed to: Commissioner of Patents and Trademarks, Washington, D.C. 20231. If applicant desires to fax a response, (703) 872-9306 may be used for formal communications.
